**Claim Amendments**  
Including a complete listing of all claims

Claims 1-22. (Canceled)

23. (New) An electronically detectable ball usable for a ball game comprising:

an external covering having an internal surface;

a first bladder portion placed within said external covering and conforming substantially to the internal surface of said external covering;

a second bladder portion placed within said external covering and extending along a chord between said first bladder portion; and

a passive detectable electronic location sensor fitted in said second bladder portion,

whereby said passive detectable electronic location sensor is adapted to be detected and the occurrence of a goal is capable of being confirmed.

24. (New) An electronically detectable ball as in claim 23 wherein:

said passive detectable electronic location sensor is located midway along the chord.

10/527,873

P-2564

25. (New) An electronically detectable ball as in claim 23 wherein:

the chord comprises a diameter.

26. (New) An electronically detectable ball as in claim 25 wherein:

said passive detectable electronic location sensor is located midway along the diameter and at the center of the electronically detectable ball.

27. (New) An electronically detectable ball usable for a ball game comprising:

an external spherical covering having an internal spherical surface;

a bladder placed within said external spherical covering and conforming substantially to the internal spherical surface of said external spherical covering;

a sensor support extending along a diameter of the internal spherical surface and fixed at each end to said bladder; and

a passive detectable electronic location sensor formed inside said sensor support substantially midway along the diameter,

10/527,873

P-2564

whereby said passive detectable electronic location sensor is adapted to be detected and the occurrence of a goal is capable of being confirmed.
